Who are we?

We're cybersecurity practitioners and engineers who sell things that make cybersecurity easier.

We help organisations get better at Security Operations and Cyber Threat Intelligence with specialised consulting, engineering, and managed security platforms.

Our CTI Team

Chris Horsley
Principal Consultant

Global speaker and trainer on CTI and MISP including at FIRST, AusCERT, AISA CyberCon and hack.lu. Served on national CSIRTs, including JPCERT and AusCERT.

Terry MacDonald
Principal Consultant

Major contributor to the OASIS STIX, TAXII and CybOX threat intelligence sharing standards. Chairperson of the New Zealand Internet Task Force.

Prescott Pym
Principal Consultant

14 years in security operations at Verizon. One of the architects behind the Australian Signals Directorate's national threat intelligence sharing program, CTIS.

cosive

Why us?

We are globally recognised Cyber Threat Intelligence experts with extensive threat sharing experience.

We were key partners in the design and build of the Australian Signals Directorate's national threat sharing program.

Our customers are based in US, UK and Europe.

Industries:

- global finance
- telecommunications
- critical infrastructure providers
- federal governments
- large educational institutions

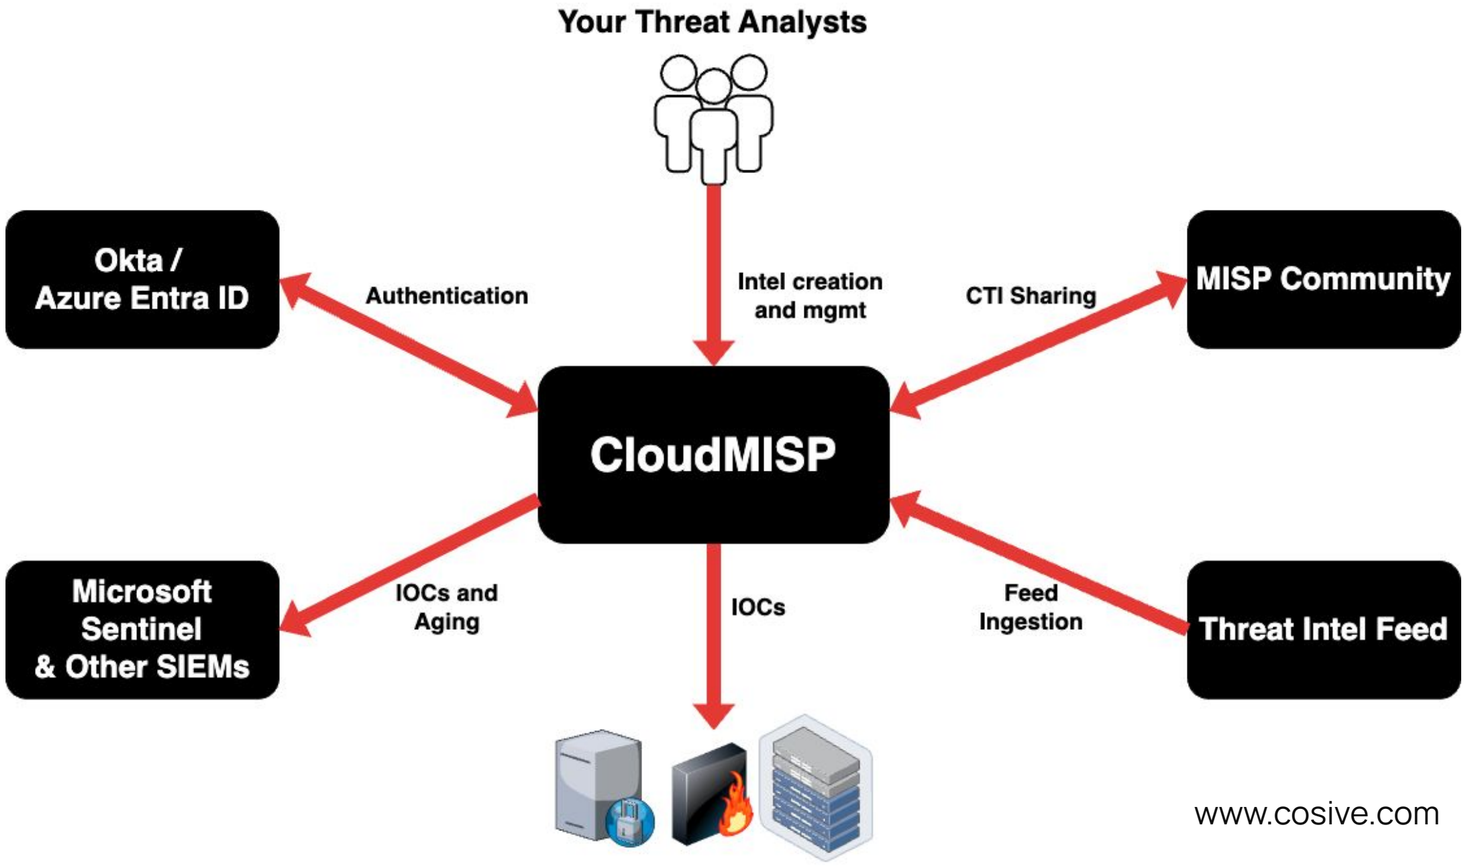
What's CloudMISP?

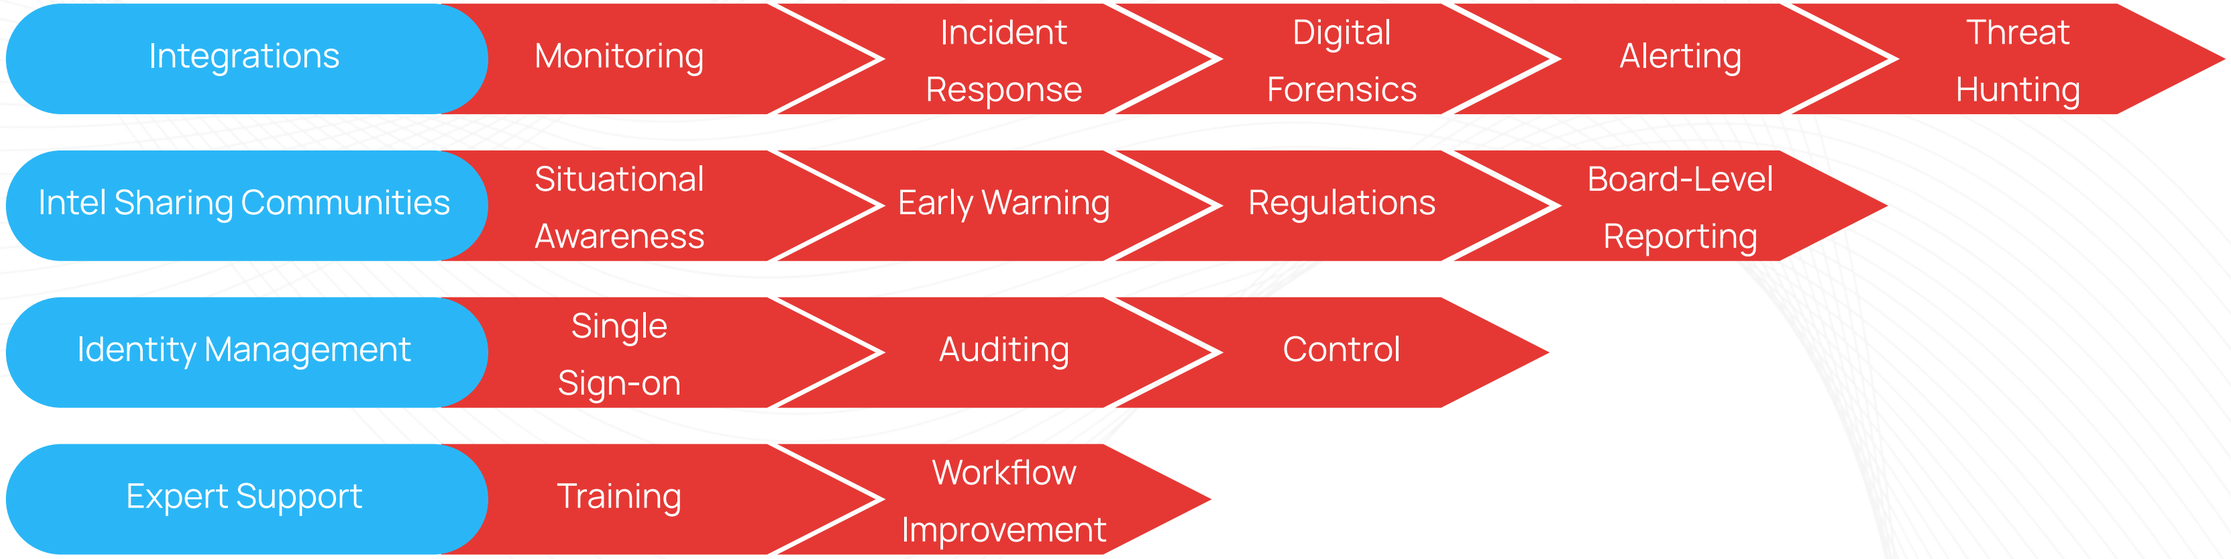
CloudMISP is your CTI central hub, connecting your analysts, security tools, and SIEM with the high quality threat intelligence feeds you receive from the MISP Community.



cosive

Why CloudMISP?

Cosive CloudMISP has more features than a standard MISP



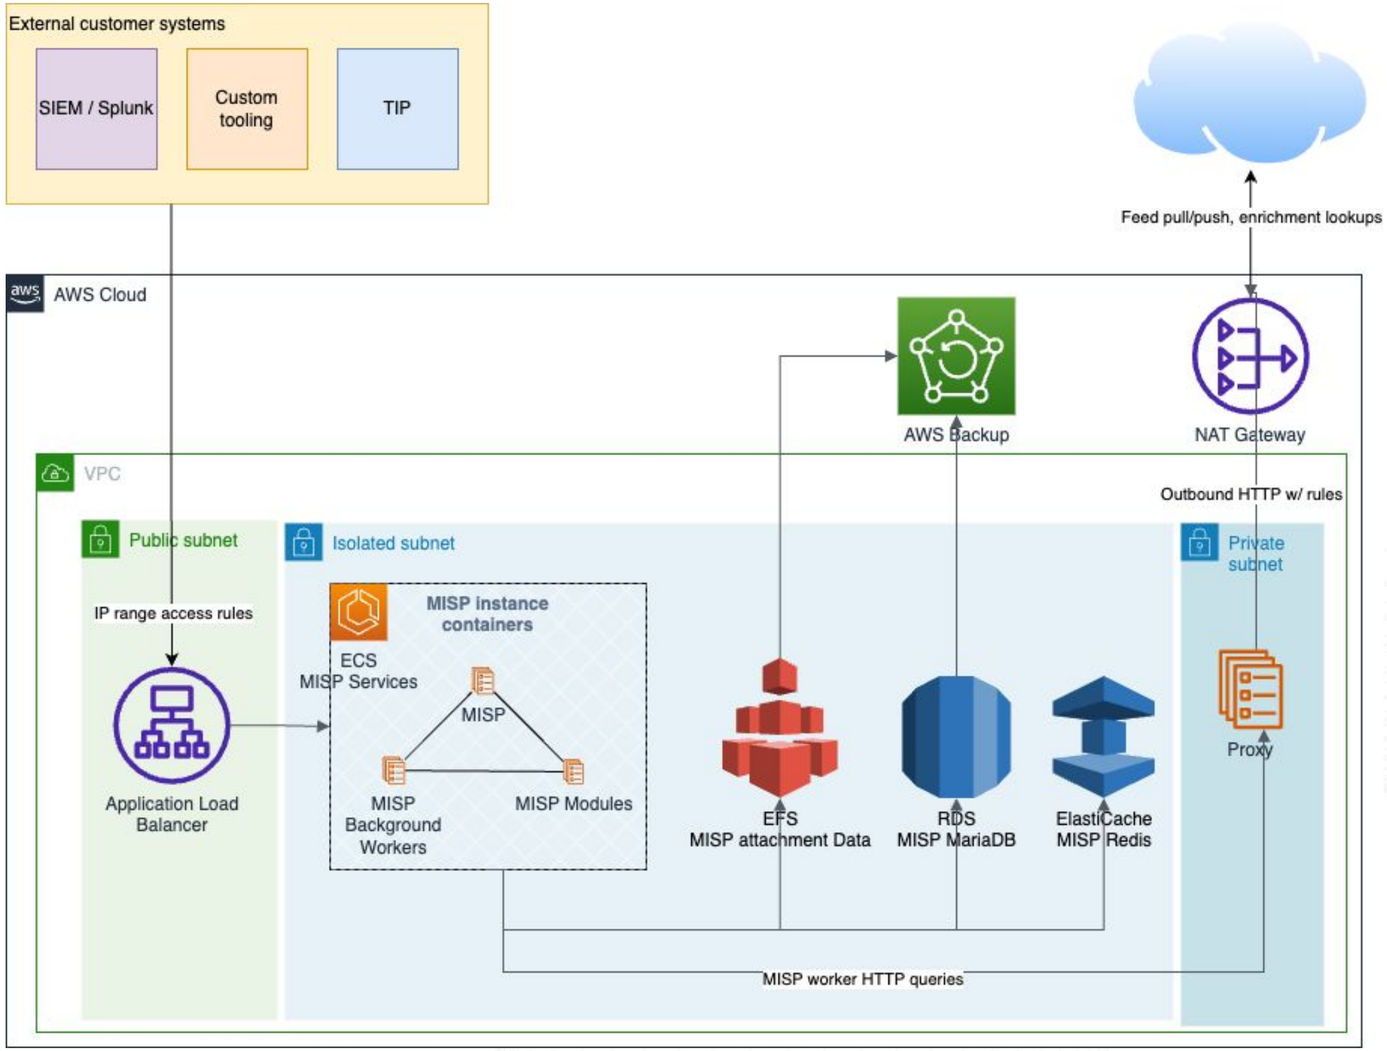
cosive

What you get

You get your own CloudMISP dedicated containers in your own private network in any AWS region. All parts of the system are fully managed and maintained by Cosive.

We have completely rearchitected MISP to speed it up and make it more resilient.

CloudMISP is much more than a MISP server in the cloud!



cosive

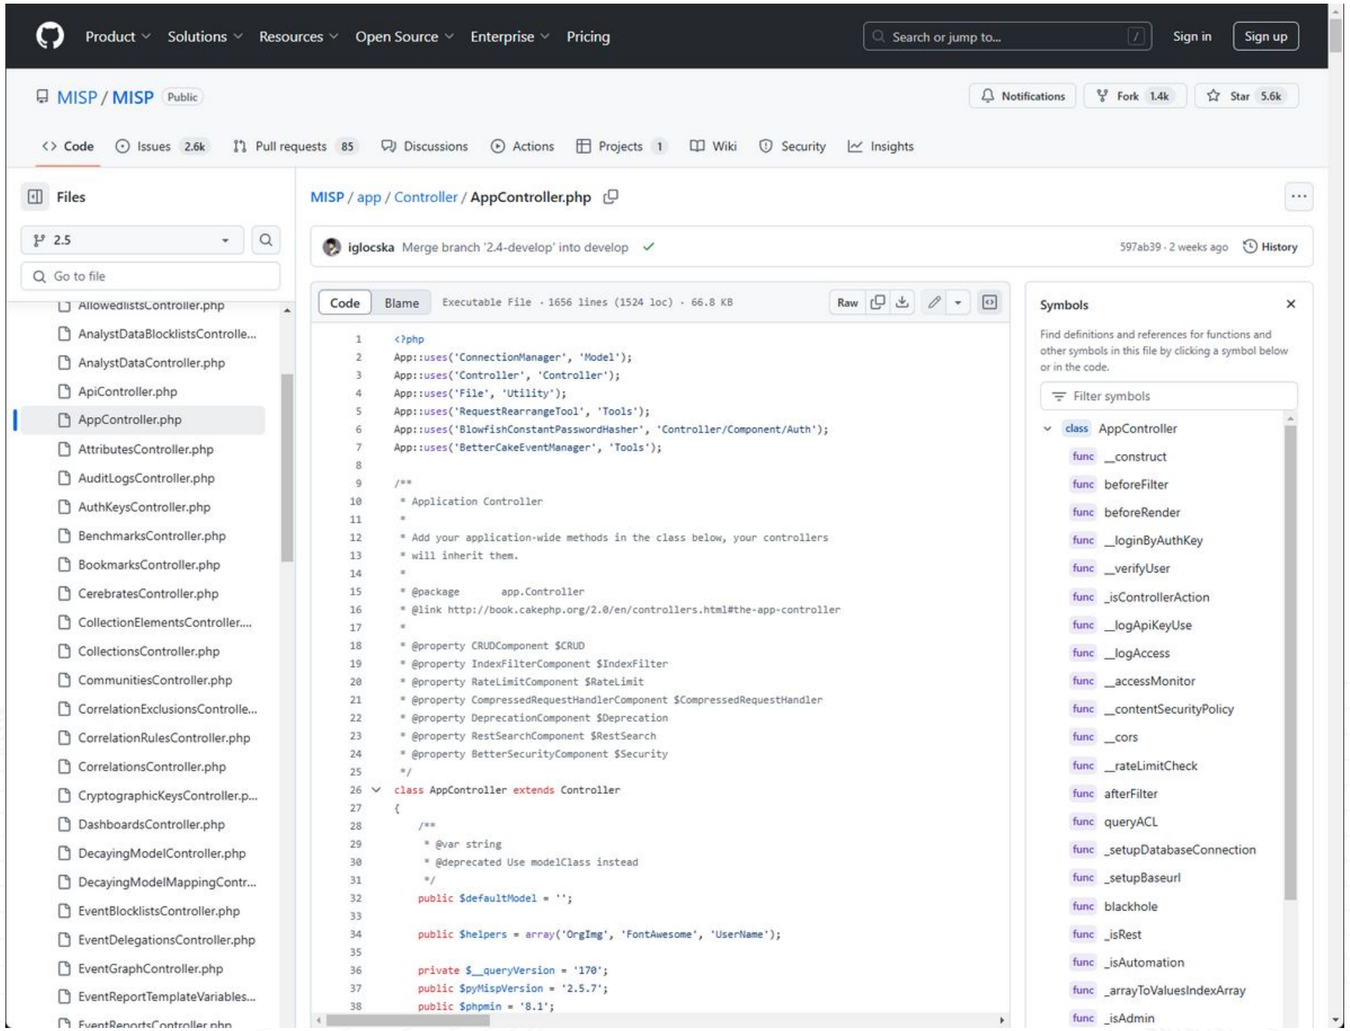
What you get

You get reliable upgrades.

We validate the code changes line-by-line for any new MISP releases, and we perform automated and manual testing to make sure that the new release will work.

When an upgrade passes our validation process we can roll it out almost instantly.

You will have less than 4 seconds outage window for each upgrade.



cosive

Want to share with peers?

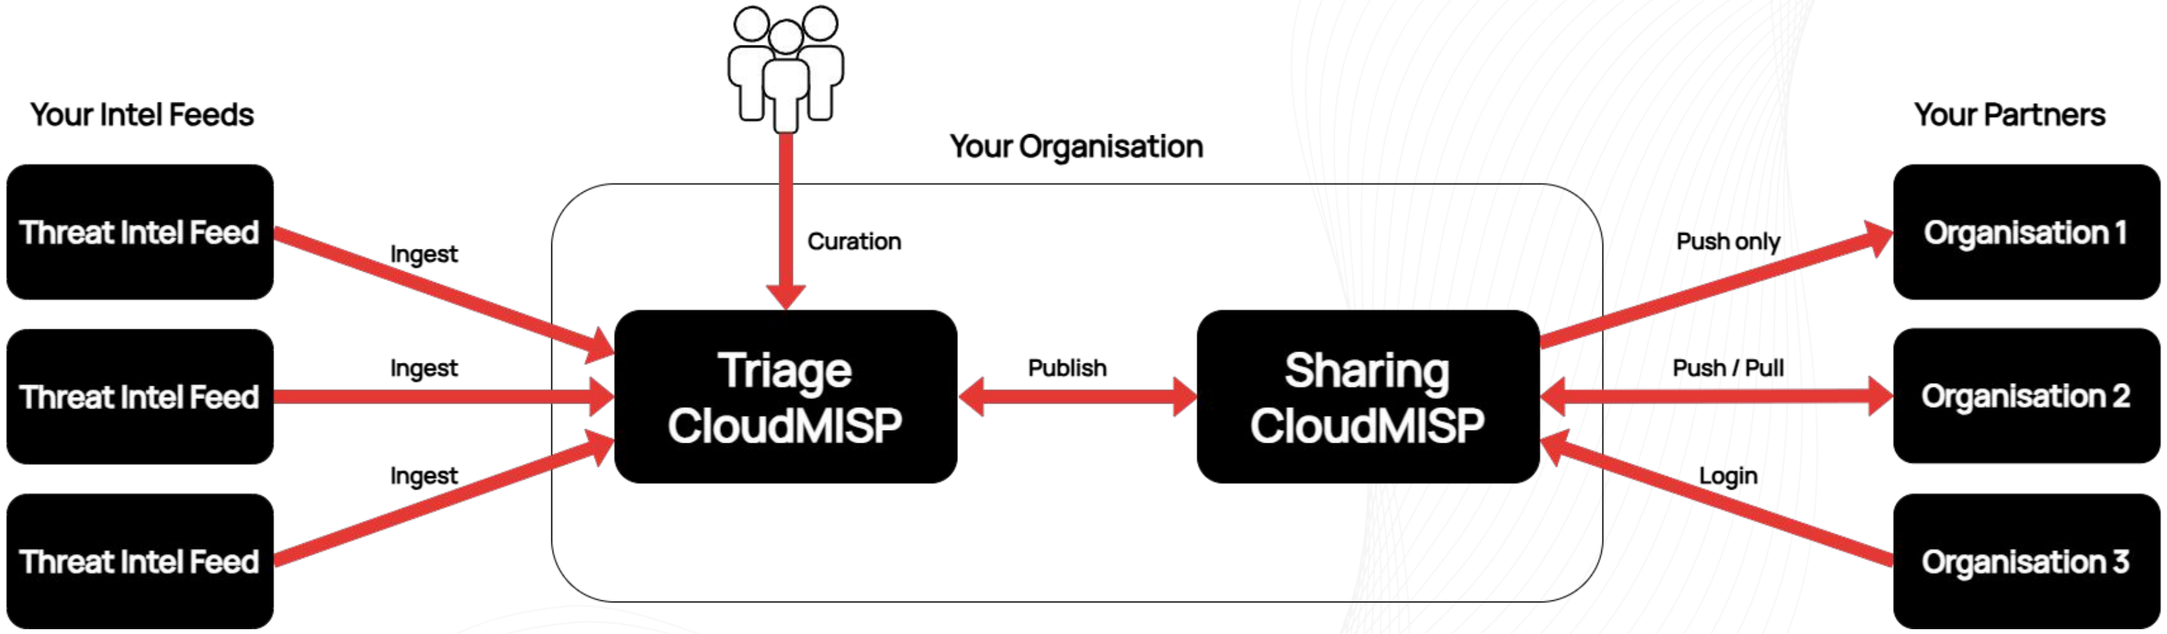
We can help you learn how!

We have extensive experience developing and implementing CTI sharing programs. Cosive were key partners in the design and engineering of the Australian Signals Directorate's national threat sharing program.

We can share our learnings so you don't have to make the same mistakes.

- Architecture & Design
- Priority Intel Requirements
- Filtering Unwanted CTI
- Triaging Workflow
- Dissemination Workflow
- STIX/TAXII Ingestion

Typical sharing pattern



cosive

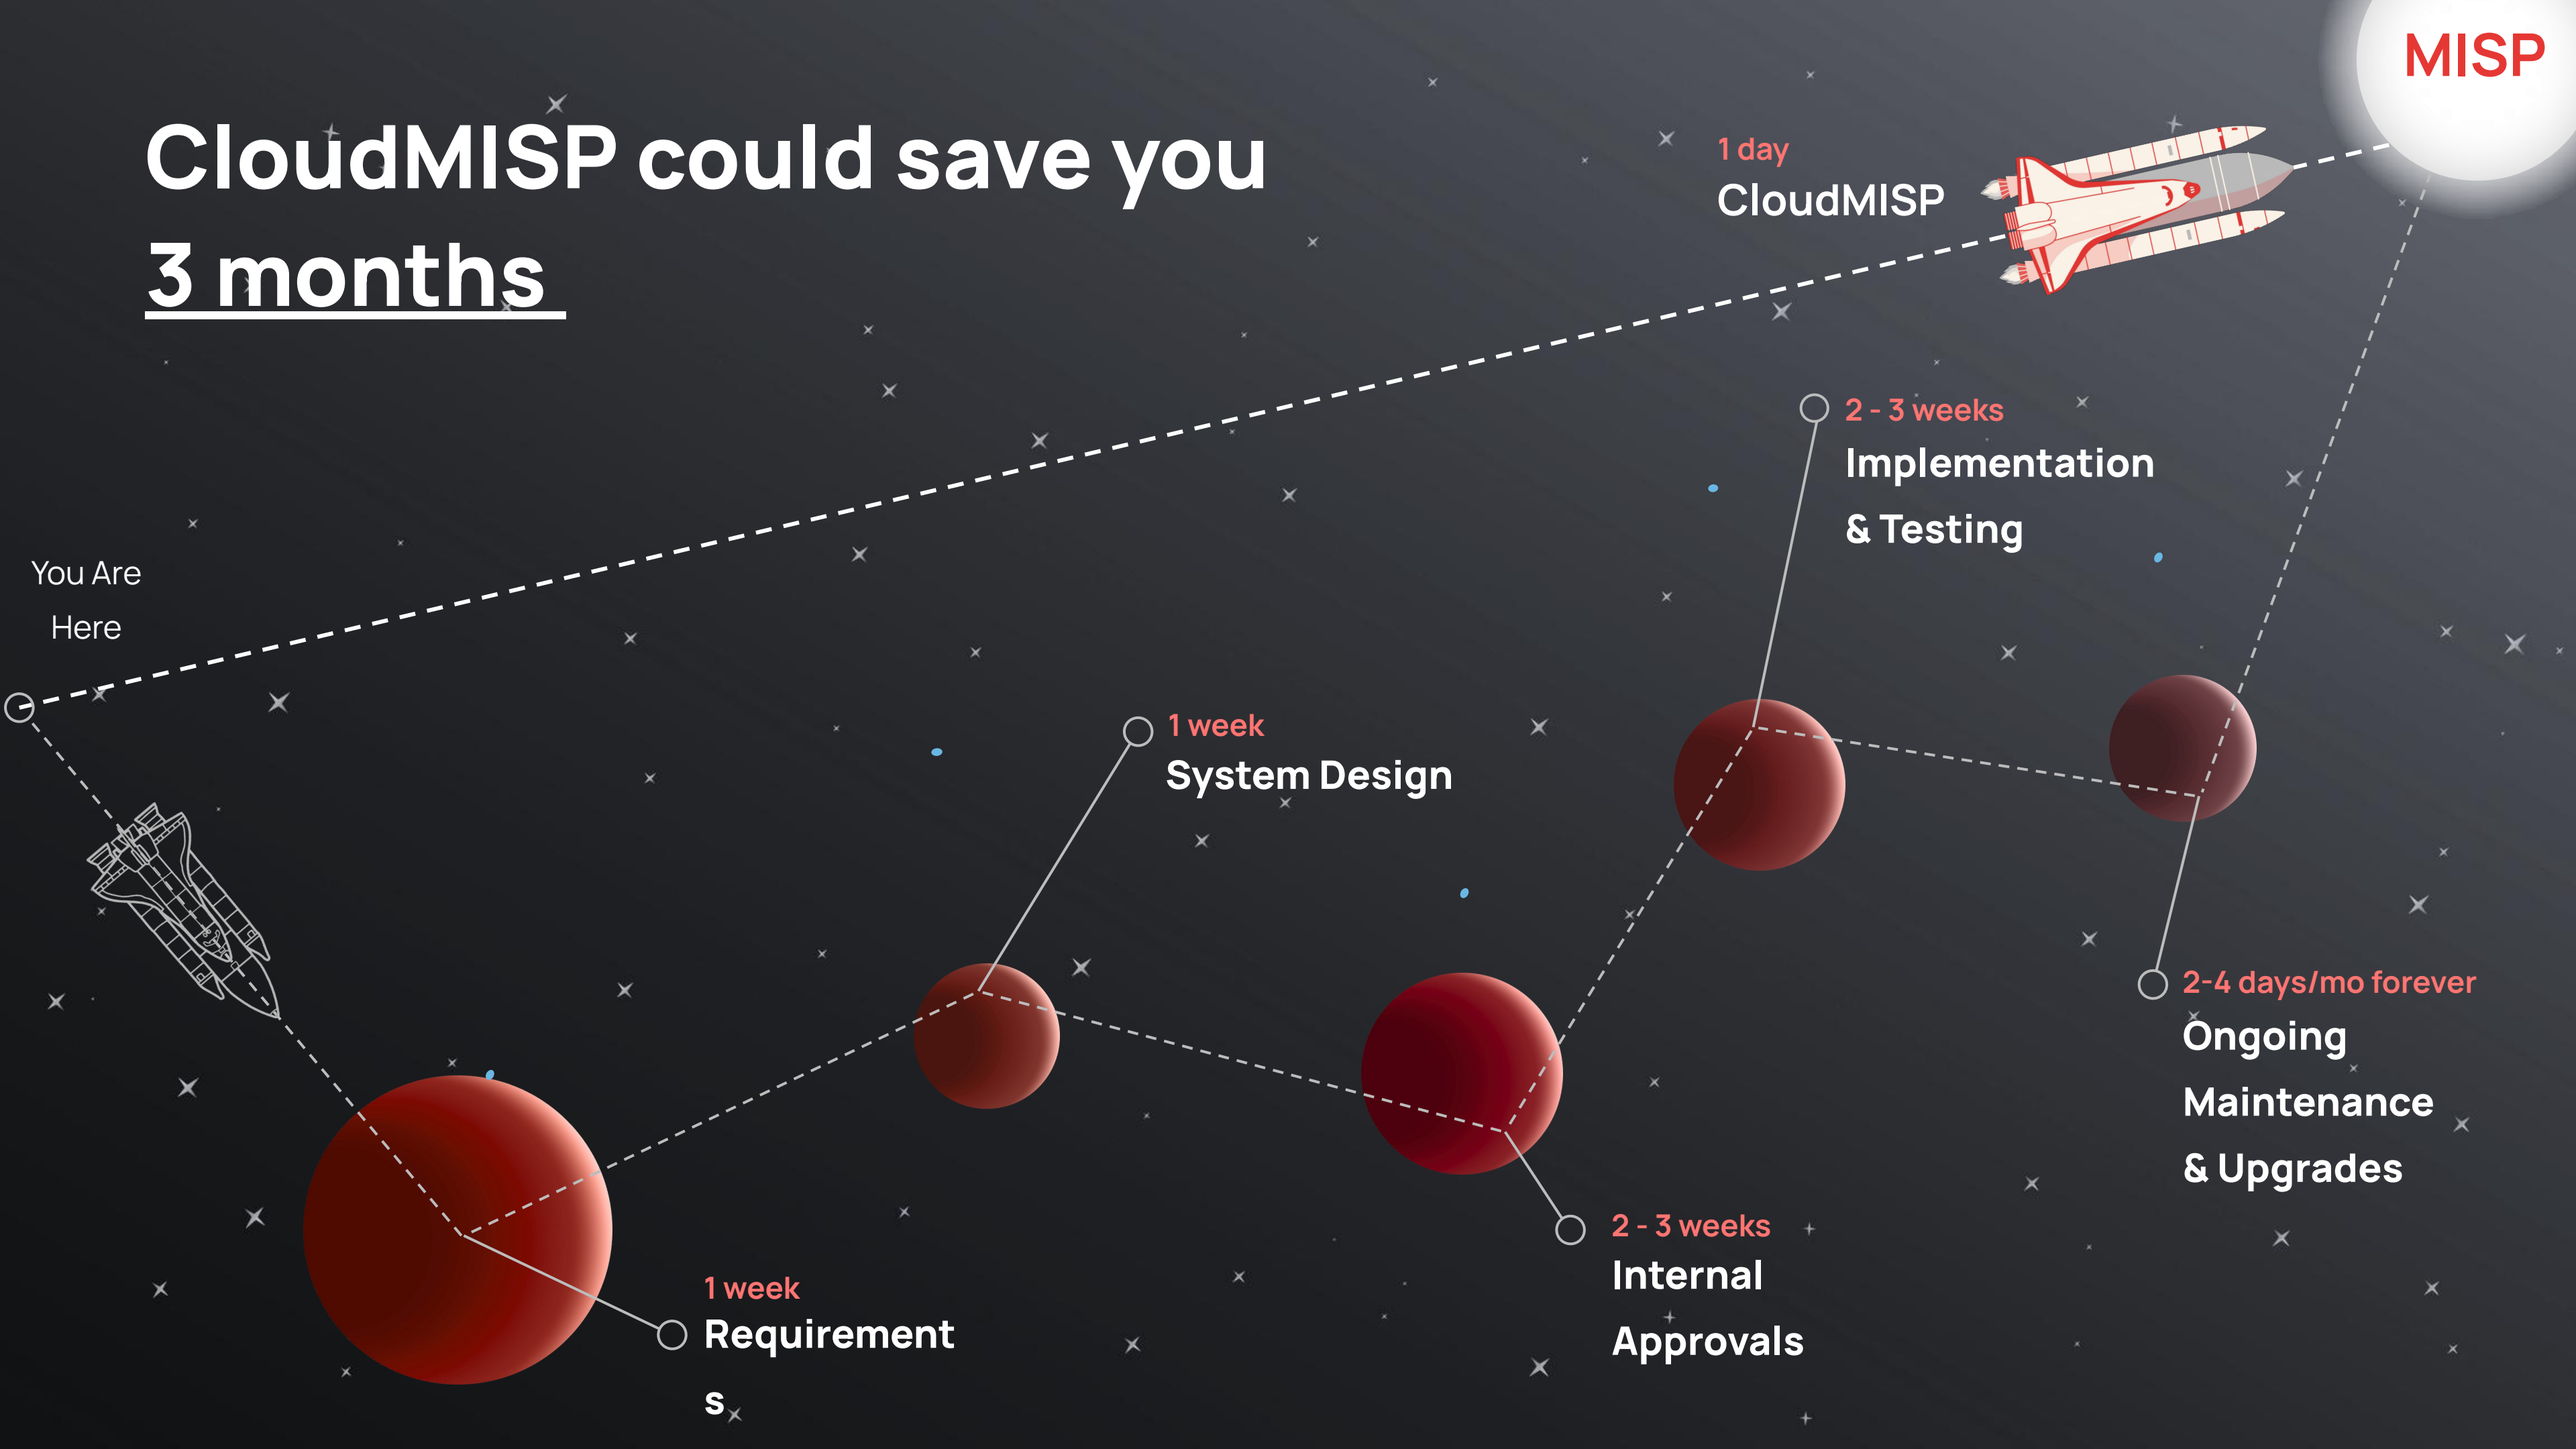
I could do this myself

Absolutely! But be warned - it will take you far longer than you think it will.

Some organisations have taken 3 months to install MISP themselves.

- Learning MISP from scratch
- Weeks/months of dev time
- IT ops building the server
- 20+ upgrades per year
- Automate daily backups
- Disaster recovery
- Change control approval
- Open up firewalls
- Configuring network
- Alerting
- Develop SSO plugins
- Configure SSO
- Develop your workflows
- Repair MISP
- Logging & monitoring

CloudMISP could save you 3 months



cosive

Need even more help?

We help organisations overcome the common obstacles to running a successful CTI program.

MISP & CTI Training

MISP Kickstart Training trains your staff to use MISP. CTI Training teaches the basics of a cyber threat intelligence programme.

CTI Processes and Workflow

We help you build your CTI processes and MISP workflow so that MISP works the way you work.

Custom Integrations

We can build you custom integrations to connect any security tool to any other security tool in any programming language.

Help sourcing Threat Intel

We can help you find the right threat intel for you. We partner with many quality CTI providers globally.

But enough about us!

The most important thing is what **you** want to do.

How can we help?

NEXT

Let’s book our next meeting

While everyone is here, let’s get the next meeting planned.

Once that’s done, we’ll send through some information and indicative pricing to help with your project business case.
