Introduction
Pages that need fixing

Introduction

Our Advisory Board has been adamant that our website is turning away customers and failing to communicate what we really do. They have told us that we urgently need to make some tactical changes to the website in order to get the right message to the right people.

The website is our main communication channel, and it doesn't matter what our linkedin and blogs and podcasts do, if our website is wrong then we will not convert.

This is why this is an urgent item that needs updating immediately.

The Cosive Senior Leadership team agrees that this is the most important thing to fix at the moment from a Marketing Perspective.

Pages that need fixing

The following pages need updates to better engage our ideal customers, and to speak to them better:

URL	What needs fixing
Update: https://www.cosive.com/	Only talks about APAC, which will stop global ppl Only talks about our products Nothing about our target customers and what we can help with (sharing, new cti programmes) Should focus on sharing and CTI programmes Should enable worldwde Needs to link to a sub page for each ICP: - Sharing communities - New CTI programmes - CTI programme uplift - People who've run MiSP and hate it
New: https://www.cosive.com/solutions/sharing-communities	New sharing communities page that talks about how we can help set up sharing community
New: https://www.cosive.com/solutions/new-to-cti	We help organisations who are new to CTI and want help putting a roadmap together.
New: https://www.cosive.com/solutions/cti-improvement	We help organisations who have an existing CTI programme and want to make it even better

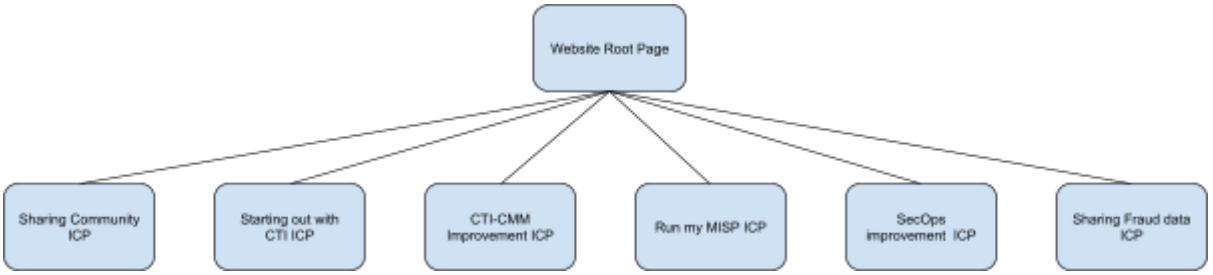
New: https://www.cosive.com/solutions/run-misp-for-me	We help organisations who spent way too much of their time running MISP, and want to take the pain of that away
Update: Site Nav	We need to vastly simplify the CTI Services and SOC services component. Recommend having a single 'Security Consulting' menu item that links to a single Security Consulting page. Then we can mention the CTI, SOC consulting and training within that (linking to individual pages if needed in the future?)
Update: https://www.cosive.com/capabilities/cloud-misp	Need to add the 3 different purchasing options to the CloudMISP page to show the differences between the versions. We really need to highlight that its not just CloudMISP - you also get consulting as part of Accelerator) Premium offering! Call to action: Unique selling proposition Enterprise We do customisations We're really production quality Minimal upgrade outages etc
Update: https://www.cosive.com/capabilities*	Probably should scrap all of these pages and be less specific.

Replacement content

We have worked on replacement content that will be loaded onto the website to provide the core guidance that we want to give to our prospects.

Updated Website Structure Overview

The structure of the website is changing slightly, as we are adding pages that reflect the new messaging where we want the prospects who visit our site to feel like they are one of the customer profiles we have on the front page.



Root Website Page

Current issues

- Headline talks about us as APAC leader, which may stop global customers from talking to us. Need to remove the APAC restriction.
- Main page only talks about our products - misses our real USP
- Not talking to user as a customer
- Nothing about our target customers and what we can help with (sharing, new cti programmes, fraud information, OT experience, etc)
- Should highlight the things that people typically come to us for:
    - Help sharing CTI and building sharing community
    - Help establishing CTI programmes
    - Help improving existing CTI programmes with CTI-CMM
    - Help running MISP for CTI experts
    - SecOps improvement
    - Talk directly to banks and finance orgs as they are a big part of our market.
- Should show that we are worldwide - we can always cut back on areas we support during discussions with customers.
- Root website page needs to point people down different information paths depending on what they want to learn about
- We also need to keep the information high level to support CISOs visiting.

Updated content

Header: We make threat intelligence easy

Tagline: With decades of threat intelligence experience, Cosive can help you reach your intelligence sharing or cybersecurity operations goals.

- Creating a new CTI team and need help? (Learn More button)
- Want to make your CTI team better with CTI-CMM? (Learn More button)
- Want someone to run MISP for you? (Learn More button)
- Need help improving your SecOps? (Learn More button)
- Are you a bank or a financial organisation? (Learn More button)

<About us section>

Cosive is a cybersecurity consultancy specialising in Cyber Threat Intelligence (CTI) and Security Operations (SecOps). We help organisations, government agencies, and critical infrastructure providers around the world build and operate modern security capabilities through specialised consulting, engineering, and managed security platforms.

<Things that make us different section (off to the side?)>

Things that make us different:

<this list should rotate showing one at a time>

- We partner with our customers, working with them over many years to help them achieve their goals
- We contribute improvements to open source software like MISP
- We're so technical that even our project manager codes in Javascript
- The MISP developers attended our training course on MISP
- We're core contributors to the CTI-CMM project

Sharing Community ICP Page

NOTES: The header of this page should match the link name from the root webpage.

Header: Want to set up a sharing community?

We can help you set up an intelligence sharing community to help share any sort of information that you want. We've set up sharing communities for banks, cybersecurity organisations, resource companies, industry bodies, governments and more.

You need our help

It takes time and effort to create a sharing community. You can't just buy an intelligence platform and leave it at that. You have to:

- Get people interested to join
- Make it easy for them to consume the data you are sharing
- Be flexible in how you share the information
- Decide if you will accept new information from your members
- Figure out how to triage new information for quality control
- Guide people on how to use the information for actionable outcomes

It can be a complicated process.

We can help you make sense of the mess and make your sharing community a success.

<Sharing community FAQ section>

Sharing Communities FAQ

- **Can you help us share fraud information?**
  Yes. We can help you share any sort of information or intelligence. MISP already has a very broad range of objects that it supports out of the box, and we are easily able to create custom objects if you need them.
- **Can you help us share cyber threat intelligence?**
  Yes. We can help you share any sort of information.

Starting out with CTI Page

NOTES: The header of this page should match the link name from the root webpage.

Header: Creating a new CTI team and need help?

We know what it's like. You've been asked by your CEO to create a new cyber threat intelligence function in your organisation but you don't know where to start.

We got you.

We've helped many customers figure out the right CTI function for their needs. Every customer has different budgets, headcount, risk appetite and regulations, and the right CTI programme needs to take all of those factors into account.

We can help you

It takes time and effort to create a sharing community. You can't just buy an intelligence platform and leave it at that. You have to:

- Get people interested to join
- Make it easy for them to consume the data you are sharing
- Be flexible in how you share the information
- Decide if you will accept new information from your members
- Figure out how to triage new information for quality control
- Guide people on how to use the information for actionable outcomes

It can be a complicated process.

We can help you make sense of the mess and make your sharing community a success.
